

ABSTRACT

The present disclosure relates to calls to a particular communication service and carrier networks, based on location of a user. The user has a wireless communication wireless communication device that functions as a locator of the user, and indicates where the user may be in proximity to communication networks that provide communication services to the user. The various communication networks may include wireless networks with plain old telephone systems with access points that communicate with the wireless communication device. Particular networks may have devices that are enabled with wireless technology to communicate with the wireless communication device. Calls may be forwarded to the wireless communication device or other communication device of a determined network based on the desire of the user.
